# Achievements

- Built a package using Python which supports locally hosted LLMs via Ollama and Open AI backends
- Real-time factual scoring system with source transparency (links + explanation)

# Impact

In a world of misinformation, FactVerifAI aims to support anyone working in collaborative document environments by enhancing trust and accountability. It contributes to European digital sovereignty by offering a sovereign, open-source alternative to fact checking solutions.

# Next Steps

- Expand support for multiple languages
- Adding more LLM backends such as Agno Framework
- Expand the feature to allow users to fact check full documents
- Conduct user testing with public sector teams across the EU to refine UX and functionality
